

Parasols
2024 Season

Glatz 

Long live summer!

Spending time outside and enjoying the days until evening falls. This is how we make the most of life under the open sky – aided by Glatz parasols.

We track the movement of the sun and break new ground time and again so we can offer you fascinating designs, innovative technologies and quality that's second to none.

Glatz parasols are never left in the shade when it comes to their aesthetics, function and convenience. With 19 models in different formats, 70 unique colours and more than 20,000 possible combinations, we provide comfort and shade for individuals and companies, offering UV-resistant, windproof and waterproof solutions for outdoor spaces large and small.

Our certified sales partners also know how important it is to satisfy a wide range of requirements in terms of design, ergonomics, ease of use, peerless protection and top-quality materials. We listen to them and work hand-in-hand with them to ensure a consistently high level of quality.

At Glatz, all our employees are deeply committed to ensuring our parasols offer customised sun protection over the long term. Even after 128 years, we're still going strong – and showing the sun how well our shade complements its rays.

Markus Glatz and the entire Glatz team

Our values

“I like it here!” Ideally: “I feel at home here!” When describing the atmosphere of a particular place, one intuitively draws on one’s own feelings. And this happens long before one tries to describe an ambience with objective parameters such as size, acoustics, panorama, light or warmth. This sense of well-being in the outdoor area is our ultimate goal. It has as much to do with craftsmanship as it does with stylistic confidence. Both are based on our longstanding experience as a Swiss family business. Because, for more than 125 years we have been designing and building parasols that combine two Swiss virtues: innovation and tradition. We don’t just embody these terms, they are also reflected in our three brand values of durability, individuality and design, as well as in our range of parasols.

Built for many summers

For us, high quality means the sum total of the material and its processing. Our parasols are designed so that they do their job in an extremely reliable way. This starts with the design and ends in the wind tunnel, where all of our parasols are tested for their wind stability. This also means that our fabrics offer the maximum protection against the sun and retain their original colouration for a very long time, despite the UV rays.

A tailor-made solution for every situation

Every place is different. Our parasols are therefore available in almost every possible variation. We are very proud of this uniqueness. We offer a solution which is quite literally tailor-made for every situation. From the small, angled balcony to the extensive patio at a Grand Hotel.

Timelessness instead of short-term fashion

If we reduce the design of all our parasols to a common denominator, we speak of timeless elegance. Of course, over the several decades in our history, more than one useful detail of a visual nature or technical advancement have been implemented in our parasols. What you certainly won’t find in our parasols, however, is any attempt to follow short-term fads and trends. We set trends in ergonomics and functionality. That is what makes a parasol from Glatz stand out.

For the patio and garden

We know how important your home is to you. We therefore make parasols which reflect your personal style to perfection: from the futuristic swimming pool landscape to the garden behind the house. Our parasols are timeless, functional and durable. And for many long summers, a highlight in the most beautiful summer residence in the world – your garden.

For hotels and restaurants

With a parasol from Glatz, you can transform the outside area of your restaurant into an indoor area. After all, the durability and functionality of our parasols gives you and your guests protection and safety outdoors, also during unsettled weather conditions. That means you can start the open-air season earlier in your outdoor area and entertain your guests until the late autumn. Almost all parasols can be equipped with LED lighting and heaters, and some can even be fitted with a motor drive. The high closure height means that you don't need to move any furniture around.

For architects and designers

Anyone developing and implementing sophisticated residential complexes or hotels requires a conclusive concept for the outdoor areas. In this respect, the designer team at Glatz is made up of competent consultants for innovative shading solutions, and supports architects and designers in the implementation of special solutions. A consistent system was created, based on our parasol design and the clear conception of the product, which is finely tuned to suit your construction plans, right down to the last detail.

Usage locations

Hotel & catering

This model of parasol is particularly suitable for the demanding nature of everyday life in the hospitality industry. It can be customised in terms of its colour, shape and size and combined with other models.

Lawn

Due to its functionality and robustness as well as its ability to be fixed into the lawn, this model of parasol is strongly recommended for lawns small and large.

Patio

Whether big, small, square or rectangular – this model adapts to the conditions on the patio and sets highlights out-of-doors.

Balcony

This model and its adjustment options give shade to the very last corner of the balcony; due to its design, it hardly takes up any space.

Fastening solutions

Base

This type of parasol can be fastened to a base or a pedestal with added weight. The location can also be changed at any time, without any mounting work. This can be fastened with a clip which is designed not to damage the pole.

Ground socket

If the parasol is to be fixed firmly in one place, a ground socket which is set in concrete is recommended. Trip hazards are avoided due to the full integration of the parasol in the area of seating.

Lawn spike

This model can be fixed to a new location in the soft ground within a very short time with a lawn spike which is sunk into the ground. This can be fastened with a clip which is designed not to damage the pole.

Balcony bracket

If space is limited, this model of parasol can be attached to the balcony railing using a clamp.

Wall bracket

Walls and partitions are no impediment, as this model of parasol can be attached to them on a space-saving basis thanks to the wall bracket.

Owners of Glatz-parasols stay on the safe side when they use the original accessories from Glatz to achieve the optimum fastening and stability. Only in this way are the optimum use and the Glatz warranty guaranteed.

ALEXO®

The classic parasol since 1931

ALEXO®

The classic parasol since 1931

Alexo is an icon. For over 90 years, this quintessential parasol has perfectly combined design and functionality. Made of Swiss ash wood and featuring a gear joint, its pole as well as its domed parasol roof make it a real classic for sunny days. Thanks to the tilt action of up to 90° and Alexo's ability to rotate around its own axis, creating shade becomes child's play.

At 200 to 220 centimetres in diameter, Alexo is also the ideal parasol when space is limited. Its break-proof ribs, the iconic and high-quality ash wood mast and a solid gear joint, made of die-cast zinc, ensure that Alexo is a permanently reliable companion. And as you would expect, it comes with assorted fixations and the appropriate flounce. This is what *savoir vivre* with a rich heritage looks like.

PIAZZINO

The long-lasting wooden parasol

PIAZZINO

The long-lasting wooden parasol

The continuous pole and robust frame made of eucalyptus wood give Piazzino its authentic aura and strong stability. Yet our high-quality wooden parasol also impresses with its ease of use: thanks to a pulley system, it is quick and effortless to operate. Honest, practical, Swiss.

Timeless elegance, ease of use and reliability are what make Piazzino so popular. Its durable eucalyptus wood and the use of extremely robust plastic for highly stressed components such as the crown, runner and top are what give it its long service life. Its fabric is always under tension, as the parasol roof is height adjustable thanks to the runner. Our Piazzino loves to provide natural shade.

TEAKWOOD

The elegant masterpiece in precious timber

TEAKWOOD

The elegant masterpiece in precious timber

Aesthetic, elegant and valuable. Teakwood is the Rolls-Royce of wooden parasols. Untreated teak, high-quality leather flaps for stowing the rope, a double pulley system, leather-reinforced fabric corners and protective metal caps on the rib ends – this is the legacy of unique parasol-making craftsmanship.

The double pulley system allows for quick and easy opening of this parasol, which is offered exclusively in the higher-quality fabric grades 4 or 5. The runner is height adjustable and is secured with a metal pin, which is attached with a chain. The ribs are securely bolted, and a metal protector at the end of the untreated teak pole ensures a long service life. Teakwood combines aesthetics with exemplary manufacturing techniques, wholly in keeping with the Glatz tradition.

NEW

SMART

Our modern compact parasol
with a minimalist design

SMART

Our modern compact parasol with a minimalist design

The epitome of outstanding design and functionality, the new Smart model is built for a modern lifestyle. Its simple design with a handy runner for opening, the option to tilt the parasol roof in both directions, 360° rotation of the upper pole and stepless height adjustment make our new, flexible centre-pole parasol the perfect choice, even where space is limited.

In combination with the powder-coated aluminium profile in white or anthracite, the flat ribs with their sophisticated ball and socket joints create the modern, floating aesthetic of the parasol roof. The mechanical heart of the system is the cleverly concealed technology inside the smart runner. When this is pushed upwards, the parasol can be opened manually in no time at all, and its height can be adjusted steplessly up to 50 cm with the rotary knob. Thanks to the tilter, the parasol roof can be tilted up to 32° to the left or right with minimal effort. It also has an internal support tube, thanks to which the parasol and base appear to be cast from a single mould. This is technical innovation with a keen eye for detail.

TWIST

The ergonomically complete design purist

TWIST

The ergonomically complete design purist

The flat parasol roof, handy crank and ergonomic swivel mechanism reflect our ambition to create sustainable inventions. Twist is easy and convenient to open at hip height with just a few rotations of the crank, offers stepless tilt adjustment thanks to the rotary handle, and can be rotated 360° using the practical clamping lever. The epitome of simple yet elegant parasol design.

Together with the flat parasol roof, the white and anthracite powder-coated aluminium frame and ribs create a modern, floating look. The high-quality canopy is self-tensioning, thanks to spring-loaded rib ends. The mast features an internal steel pipe for which a lower pole is available, so that the parasol height can be adjusted to ensure the right amount of shade at all times. Typical Swiss precision.

SUNWING® Casa
The handy all-round parasol

SUNWING® Casa

The handy all-round parasol

Always there for you when you need shade – but never in your way. The innovative technology behind the Sunwing Casa ensures a pleasing sense of lightness, as the protective fabric floats freely above you. One crank opens the medium-sized side-mast parasol in the blink of an eye, while another crank tilts it up to 45°.

Timeless design, pioneering crank technology, ease of use, a high-performance side mast and 360° rotation are the hallmarks of the Sunwing Casa. Its slender supporting rods and the parasol roof frame are made of anodised or anthracite powder-coated aluminium. The high-quality canopy is self-tensioning, thanks to flexible rib ends. Freedom is the new normal.

SOMBRANO® S⁺
The flagship parasol

SOMBRANO® S⁺

The flagship parasol

A turn of the crank is all it takes to enjoy stylish, class 360° solar protection. Sombrano S⁺ is the first side-mast parasol that, as if by magic, can be opened synchronously and can also be positioned horizontally. This represents perfected ease of use and maximum solar protection in combination with timeless elegance, without feeling constrained.

No matter where the sunlight falls – with our bestseller, you always have a relaxing spot in the shade. The robust lateral mast ensures that you can move about freely in the shade. The high-quality parasol roof ensures 100% solar protection and can be tilted in stages by up to 54° with the tilting rod. And thanks to the pedal-operated turnable base, it is also very easy to rotate 360° on its own axis. All-round solar protection has never been this easy.

PENDALEX® P+
The multifunctional all-rounder

PENDALEX® P+

The multifunctional all-rounder

With its look of a classic parasol roof, the allrounder Pendalex P+ ensures that shade can always be found where it is needed in gardens. This is thanks to smart technology: the parasol roof can be steplessly tilted by up to 90° in any direction as desired and – thanks to a gas compression spring – can easily be adjusted in height by up to 50 centimetres and rotated 360°.

Right-handed and left-handed users alike can insert the crank as desired and thus open and close Pendalex P+ with great ease and very few turns of the crank. The robust aluminium mast can be positioned by the edge of the table to save space, providing shade wherever it is needed. This multifunctional side-mast parasol can be used not just for solar protection but also as a vertical privacy screen. The parasol for those who love convenience.

AURA

The majestic wooden parasol

AURA

The majestic wooden parasol

A dignified mast in warm eucalyptus wood with several coatings of varnish and an aluminium core. Powder-coated stainless steel inserts in elegant silver tones. Intelligent technology and a canopy in the highest Fabric Quality 5. The selected materials and authentic design give the Aura side-mast parasol its natural magic and captivating elegance.

Despite its impressive size, Aura is manoeuvrable and flexible. Depending on the angle of the sun, the mighty parasol roof can be tilted towards the mast and rotated 360° in stages by lifting the locking lever. With just a few turns of the crank, you can effortlessly open and close the parasol. Meanwhile, the immovable base ensures the parasol remains firmly in place even in high winds. The authentically natural parasol for the discerning.

AMBIENTE Nova

The queen of the side-mast parasols

AMBIENTE Nova

The queen of the side-mast parasols

The largest Glatz side-mast parasol impresses with its incomparable wealth of variants and carefully thought-out opening mechanism. The LED lighting system elegantly integrated into the ribs and mast provide Glatz quality that can be experienced each evening. Ambiente Nova – the majestic parasol for large balconies and patios.

Ambiente Nova fulfils the wishes of exacting individualists: our largest side-mast parasol is available in various custom sizes in addition to the standard sizes. The frame is available in all RAL colours and, in addition, there are canopies in 55 colours to choose from. The comfort crank ensures smooth, synchronous opening of the parasol roof without touching the furniture. Additional options such as the individually controllable LED lighting system and the motorised opening mechanism make this side-mast parasol perfect for private homes.

FORTANO®

The windproof side-mast parasol

FORTANO®

The windproof side-mast parasol

The solid construction, flat roof and high-quality manufacturing techniques make this side-mast parasol a steadfast companion even in stronger winds. Thanks to its high closing height and intelligent technology for synchronous extension and opening of the parasol, Fortano is highly popular in restaurant settings in particular.

Its multifunctional crank reflects the cutting-edge level of our parasol technologies. Turning the crank raises the trolley whilst simultaneously opening the parasol roof. Like all the parasols in the F range, Fortano has been specially developed for use in windy spots. With our fixed ground anchors, this parasol can happily withstand wind speeds of up to 55 km/h at 300 × 300 cm in canopy size. The windproof shade-giver for restaurant gardens or at home.

FORTINO® Riviera
The compact windproof parasol

FORTINO® Riviera

The compact windproof parasol

Even at wind speeds of up to 80 km/h, the robust and aerodynamic design of our Fortino Riviera centre-pole parasol always remains master of the situation. This makes it particularly popular in any place exposed to high winds – on the coasts and beaches, on restaurant patios, in gardens and on exposed verandas.

The flat parasol roof, corrosion resistant components and robust natural anodised aluminium frame make the small, sturdy Fortino Riviera the ideal parasol for windy locations. The practical tensioning lever and patented opposing opening principle make it quick and easy to open and close – including above laid tables (up to 150 centimetres). A well-designed and convenient caster of shade that easily withstands windy weather.

FORTERO®

The medium-size windproof favourite
for cafés and restaurants

FORTERO®

The medium-size windproof favourite for cafés and restaurants

With its elegantly designed canopy, our medium-sized parasol is a firm favourite for cafés and restaurants but is also happily at home in private gardens. Its patented low-force opening principle means that, even when used above laid tables, it serves as a flexible solar protection partner as and when required. It is stable in the wind, long-lasting and safe, even when the winds reach 50–70 km/h.

Its robust construction and always-taut designer parasol roof are what make the medium-sized Fortero the solar protection king for public squares, patios and pool settings. With a closing height of 85 to 125 centimetres and a practical tensioning lever for fast and low-force opening, it is clear to see why this parasol is often the first choice for cafés and restaurants.

FORTELLO®

The windproof garden parasol

FORTELLO®

The windproof garden parasol

With parasol roofs ranging from 300 to 400 centimetres, Fortello is one of the large garden parasols. It is specially designed for use in wind-exposed locations. Its robust components and the ingenious opposing opening principle guarantee ease of use. It is immediately closable even above laid tables (closing height 95 to 135 centimetres).

Fortello centre mast is so robust that it can withstand wind speeds of up to 90 km/h. This example of fine Swiss engineering is not only wind- and weatherproof, but also great for parties: thanks to a closing height of 95 to 135 centimetres, your glasses, bottles, etc. can remain on the table when you close the parasol roof. The wind-resistant Fortello creates a shaded paradise for gourmands in outdoor areas.

FORTELLO® LED
The windproof night owl

FORTELLO® LED

The windproof night owl

Darkness inspires. Thanks to dimmable LED light strips integrated into the ribs, night becomes romantic day. Our wind-resistant centre-mast parasol Fortello LED not only provides reliable solar protection but also 10 hours of convenient, cordless lighting after sundown. The darling of night owls.

Fortello LED can easily withstand with wind speeds of up to 90 km/h. And it has plenty more to offer: a robust construction, an opposing opening principle, quick and easy opening and closing even with laid tables, and steplessly dimmable LED lights in the ribs that are battery-operated instead of relying on mains power. Solar protection and lighting for night owls, all under one parasol.

CASTELLO® Pro

The versatile allrounder for cafés and restaurants

CASTELLO® Pro

The versatile allrounder for cafés and restaurants

The giant parasol Castello Pro is ideal for outdoor areas of restaurants, for parks and playgrounds. Simple elegance and high wind stability up to 100 km/h. Quick and easy use. Customisable, including custom builds. Optional extras such as an integrated LED lighting system and heater.

Whether it is special canopy sizes, adjustments to the frame, or an optional LED lighting system and heater – Castello Pro can be customised as desired. High wind stability, corrosion resistant materials, ease of use thanks to the simplest possible opening principle, and customisation options make Castello Pro the caterer's friend when it comes to solar protection.

PALAZZO® Style

The stylish parasol even in headwinds

PALAZZO® Style

The stylish parasol even in headwinds

A stylish, flat parasol roof and a strong mast made of natural anodised aluminium: the timelessly elegant design protects against the sun and rain, and can withstand wind speeds of up to 115 km/h. With just nine turns of the crank, Palazzo Style can be opened above laid tables by hand or automatically via remote control.

Our iconic giant catering parasol Palazzo Style remains stable at wind speeds of up to 115 km/h. Thanks to 14 standard varieties and customisable special sizes, it adapts to your needs with ease. And it also sets a high convenience benchmark in terms of technology and accessories: a motorised canopy, an LED lighting system integrated into the ribs for pure white or colourful, dimmable light as well as a heater – all via remote control. Functionality and style in one design.

PALAZZO® Noblesse

The giant parasol for the ambitious

PALAZZO® Noblesse

The giant parasol for the ambitious

At 450 to 700 centimetres, it effortlessly protects against sun, and – despite its enormous size – opens with just 12 turns of the crank. The patented opposing opening principle makes it quick and easy to operate. It is windproof and available in 16 standard varieties with many optional extras, or as a custom build. Typical Palazzo Noblesse.

Premium materials, high-quality manufacturing and elegant design. The flat parasol roof opens in the blink of an eye, and the aluminium mast with its internal support tube creates a safe space beneath Palazzo Noblesse. Honest Swiss quality and optional extras such as heating and lighting show why this parasol can be found everywhere where people enjoy socialising on large patios.

PALAZZO® Royal
A Swiss masterpiece for large gatherings

PALAZZO® Royal

A Swiss masterpiece for large gatherings

With a parasol roof diameter of up to 8 metres, Palazzo Royal is the regal shade-giver in our range. We have used all of our experience to create this masterpiece for fine-dining restaurants and hotels. It can comfortably fit 20 people seeking protection from the sun and rain. Palazzo Royal sets the standard.

Large patios of hotels, restaurants and public buildings are the perfect location for Palazzo Royal. This giant parasol is quick and easy to open with just 19 turns of the crank or optionally via a motor. Custom builds and optional extras such as an LED lighting system, a heater or side panels make Palazzo Royal the supreme master of its class.

Our story

As a family company with a history extending back over 125 years, Glatz stands for ingenuity, courage and strong women: from a one-man business, we have developed into a company with more than 100 employees and are now one of the leading manufacturers of parasols both, in Europe and worldwide.

Ours is a story of people who believe in their vision. While the creativity of founder Albert Glatz (born 1870) found reflection in hand-held umbrellas and parasols, his son Albert Junior (born 1899) began to expand the product range in 1926. With parasols for the garden and the Alexo gear joint, he became a successful businessman. Later, as the inventor of the side-arm parasol and the giant parasol it was Dölf Glatz who realised how to develop the shading comfort provided by the garden parasols and giant parasol with patented solutions.

While the Glatz story began with ladies' parasols, it now sells its range of 19 parasols for homes, gardens and patios worldwide, and is the biggest supplier to private customers, and the hotel and catering sector. In 1988, Dölf Glatz passed the torch to his son, Markus, which was the dawn of a new era in which the path was set for a successful future. Thanks to his hard work, Glatz has gained a global foothold and has an increasingly impressive international reputation. 40 % of its products are of "Swiss Design", and 60 % are "Swiss Made", being manufactured in Frauenfeld.

Glatz stands for precision, reliability and high quality combined with functional design. Markus Glatz: "The drive to design ever superior products that combine timeless elegance with wind stability, durability and ease of use characterises our DNA". The motivation of the company's employees is considered crucial to its success: "Although the know-how flows into every model, it is already in their minds, and came about thanks to their considerable dedication."

"We rise to the challenges of the times," explains Markus Glatz. Glatz already manufactures on a resource-friendly basis, ensures its transport routes are kept short, obtains materials from neighbouring countries, and uses durable materials.

Lightfastness

Defines the level of bleaching by the sun. If a parasol is constantly exposed to the sun's rays, the fabric will bleach over time. How strongly and quickly this occurs depends on the Fabric Quality. Fabric Quality 5 offers excellent lightfastness: thanks to the spun-dyed polyacrylic, where the colour pigments have penetrated deep into the fibres during production, the colour intensity of your canopy will be preserved for a minimum of 350 to 700 days without losing its brilliance.

Fabric Quality 4 also features impressive lightfastness. Compared to Fabric Quality 2, which loses its colour intensity after 80 to 160 days, Fabric Quality 4 will only show initial colour changes after no fewer than 350 days. Fabric quality 4 features spun-dyed polyester, whereas fabric quality 2 uses piece-dyed polyester. Here, the fabric is first woven and then dyed; this means that the dye merely coats the fibres.

You can maintain your canopy's brilliance for longer by correctly tying your parasol when not in use and protecting it with a protective cover from Glatz.

Ensure that closed parasols are tied and the fabric sections folded outwards. Parasols should not be allowed to flutter in the wind. Patches of wear and holes do not entitle you to return the product.

UV Protection > 98 %

Every Glatz parasol offers you optimal protection. Every parasol offers protection against very strong sunlight, but not all of them protect against harmful ultraviolet (UV) rays. Although only a fraction of them reach the earth, UV rays can cause severe skin damage due to their intensity.

All Glatz canopies feature the UV protection test label. The percentage value indicated on the label is derived from the Ultraviolet Protection Factor (UPF) value. It is based on data established by the accredited Swiss testing laboratory Swiss Quality Testing Services (SQTS).

If 98 % of the harmful UV rays are filtered out by the fabric, only 2 % – i.e. two hundredths – penetrate through the fabric. This means that, with UV protection from Glatz, it takes 50 times longer for the same dose of radiation to reach the skin than without UV protection. This factor 50 is defined as a sun protection factor.

When using sun protection, it is also important to be aware of and pay attention to radiation caused by reflection from the surroundings, such as window panes, water and metallic surfaces as well as other highly reflective materials.

Accessories

People with a garden, restaurant, hotel or bistro and anyone who loves being out in the fresh air will get even more out of Glatz: an outdoor solution! Modular heaters, lighting fixtures, motor drives, protective covers, radio remote controls, ground sockets, rain gutters, bases or mounting plates: the accessories available from Glatz are extensive and can be adapted individually to each model of parasol.

Service and contact

Glatz AG sells its products via a global network of retailers and importers. In this respect, Glatz and its partners focus on one thing: Customer service!

We train our retailers in competent advice and repair work and provide them with certification for providing an excellent service in the case of complaints and repairs. You can look for your local retailers on our website at www.glatz.com.

GOOD TO KNOW: Depending on the model of parasol, the nearest specialist retailer is able to set up and install the products and to provide the customers with assistance and support. That's a promise!

Our employees will be pleased to answer any questions you may have: Tel. +41 52 723 64 64.
